DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see Remarks (page 10, first paragraph), filed 12/13/2004, with respect to claims 1-3 and 5-29 have been fully considered and are persuasive. The rejection of claims 1-3 and 5-29 has been withdrawn.

2. Claims 1-3 and 5-29 are allowed.

3. The following is an examiner's statement of reasons for allowance:

The present invention provides a new method, system, and program storage device for transcoding multimedia data on the basis of content analysis, wherein the transcoding can reduce the data amount needed to represent the images and speed up download times, the size of the images in order to fit the images onto the client display screens, and can change the storage format of the image in order to gain compatibility with the client device image handling methods (see specification, page 21, lines 4-10).

Particularly, the new method, system and program storage device comprise the following features, which the prior art taken either singly or in combination does not teach:

- analyzing the content of the multimedia representation by separating a multimedia document into individual multimedia objects, and analyzing each multimedia object individually; and performing transcoding based on said analyzing (see independent claims 1, 25, and 27).
